

ChurchOS

The all-in-one operating system for the modern church.

Members. Finance. Communications. Procurement. Branches.

One secure, multi-tenant cloud platform — built for African churches that have outgrown spreadsheets and WhatsApp groups.

Mobile-friendly

Why now?

African Pentecostal and evangelical churches are growing fast — many run multiple branches, thousands of members, and tens of millions of Naira in monthly inflows — yet most still operate on Excel files, paper attendance sheets, and personal WhatsApp accounts. Leadership has zero real-time visibility, finance is opaque, and follow-up of first-timers fails silently. A single integrated, locally-priced SaaS unlocks all of it.

The problem

Churches are mission-driven organisations doing finance, HR, events, communications, pastoral care and member management — all at once, across multiple branches. The tools they use today were not designed for that.

Member data lives in spreadsheets

Pastors cannot answer "how many active members do we have, by branch and age group?" without a 3-day audit. Records get lost when a secretary leaves.

First timers fall through the cracks

Visitor cards are filed in a drawer. Nobody is assigned to follow up. Within 4 weeks 80% are gone — and the church has no record they were ever there.

Finance is opaque and audit-unfriendly

Offerings counted by hand, recorded in notebooks, transcribed into Excel weeks later. Budgets exist on paper. Procurement is approved over voice notes.

Communications is fragmented

Announcements go out from 5 different WhatsApp groups, 2 broadcast lists and an unmonitored Gmail. No way to message just "all parents" or "everyone with a birthday today".

Multi-branch operations have no central view

Headquarters cannot see branch attendance, finance or member counts in real time. Each branch is a black box until the monthly report is emailed in PDF.

Off-the-shelf western tools do not fit

Planning Center, Breeze and ChurchTrac price in USD, lack Naira/local payment rails, demand stable broadband, and ignore the African church reality of multiple branches and cash-heavy giving.

The cost: lost members, leaked offerings, demoralised volunteers, and pastors burning out on admin work that should take 10 minutes.

Our solution — ChurchOS

A single, secure, multi-tenant cloud platform that replaces 6+ disconnected tools. Each church gets its own isolated workspace; the head pastor configures branches, units, departments and groups in minutes. Every module shares the same member, branch and finance data — so a single source of

People

Members, first timers, families, departments, groups. CSV import (5,000 rows / batch, async).

Communications

Email · SMS · WhatsApp · in-app. Target by gender, parents, department, group, branch, birthday, anniversary.

Finance

Income/expense ledger, giving categories, monthly reports, Paystack giving link, multi-branch consolidation.

Budgets & Procurement

Departmental budgets, requisitions, purchase requests with multi-step approvals and audit trail.

Events & Attendance

Service planning, head-counts, member-level attendance, automatic decline alerts.

Follow-ups & Pastoral care

First-timer pipeline, prayer requests, counselling, welfare — assigned, tracked, closed-the-loop.

Branches & Roles

Head pastor, pastors, HODs, directors, finance officers — granular role-based permissions, branch-scoped data.

Public website pages

Built-in landing page, public first-timer form, contact form — every church gets a web presence on day one.

Why ChurchOS wins

- **Africa-first** — Naira pricing, local payment rails, low-bandwidth UI, SMS/WhatsApp as first-class channels.
- **Truly all-in-one** — Members, finance, communications and procurement share one schema — no exports, no reconciliation.
- **Multi-branch by design** — Branch isolation is built into every query and permission. HQ gets a real consolidated view.
- **Operationally hardened** — JWT auth, role-based access, rate-limited APIs, audit logs, async job queue, automated tests.

Market & business model

Target market

Mid-to-large Pentecostal, Baptist, charismatic and evangelical churches in Nigeria, Ghana, Kenya, South Africa and the broader African diaspora. Sweet spot: 200 – 20,000 active members, 1 – 50 branches, monthly inflows ₦1m – ₦500m. Initial beachhead: Lagos & Abuja Pentecostal networks where multi-branch operations and modern leadership are concentrated.

Business model

- **Starter** — ₦15k/mo — Single branch · up to 300 members · core modules · email-only comms.
- **Growth** — ₦45k/mo — Up to 3 branches · 2,000 members · SMS + WhatsApp · procurement & budgets.
- **Enterprise** — from ₦150k/mo — Unlimited branches & members · custom roles · API access · dedicated support.
- **Add-ons** — Bulk SMS top-ups, custom domain, white-label public pages, paid implementation services.

Where we are today

- **Built** — Production-ready platform deployed on Railway, multi-tenant, automated tests, async job queue.
- **Now** — Onboarding pilot churches across Lagos & Abuja for 90-day paid pilots.
- **Next 6 mo** — Mobile companion app, offline service-day mode, native Paystack/Flutterwave giving, denominational templates.
